- MongoDB (*Mongoose*)
- Python
- SQL (MySQL)
- AWS (S3 Bucket)
- Docker

Languages

- polish - native
- english - B2

Profile

Junior Fullstack / Frontend Developer with hands-on experience in building fullstack web applications. Currently pursuing a master's degree in IT Automation Systems at Wrocław University of Science and Technology. Known for attention to detail, clean UI design, and a strong analytical mindset. After gaining practical experience in IT administration, I'm now fully focused on growing as a developer in a dynamic team environment.

Experience

IT Admin

2023 - currently

- Manage Azure Active Directory and user identities
- Create and maintain internal technical documentation
- Oversee and troubleshoot local network infrastructure
- Administer and optimize cloud-based applications
- Provide first-line IT support and resolve user issues
- Implement and monitor basic security measures (MFA, device compliance, backups)

Projects

'Mapify'   *GitHub*

React + Express (Node.js) + MongoDB + AWS (S3 Bucket)

Web application, which is an interactive travel map. It allows users to create an account, and 'pin' their travels to the map, along with photos, description or date. Users can create routes, with multiple journeys and explore the journeys of others, or search for different places on the map.

'Portfolio'   *GitHub*   *Website*

React (Javascript) + Vite + Tailwind CSS + Framer Motion

A personal web portfolio presenting selected projects, skills, and background. Includes a contact form and clean, responsive design.

'Wirtualna Politechnika'   *GitHub*

React (Javascript) + Spring (Java) + MySQL

Web application that is forum-like site which allows users to share posts. We were sharing tasks, but mainly I've worked on front-end part.
The project was a college course, and it was realized in partnership with an external company.
